

POLYPROPYLENE EMERGENCY SERVICE BODIES

Manufactured from polypropylene sheet, our bodies are handmade and welded together using the latest plastic welding equipment.

All components are cut using the latest computer controlled routing machines using information created from a number of computer drawing packages.

A body fabricated in polypropylene offers the following advantages over traditional body building methods:

- *Produces a lighter body than traditional construction techniques and materials*
- *Light weight = increased payload of vehicle*
- *Fuel saving as a result of the lighter materials*
- *Will not rust, corrode, crack, chip or peel*
- *Can include built in water tanks*
- *Requires zero maintenance*
- *Long operational life*
- *Can be re-mounted multiple times*
- *Excellent impact resistance*
- *100% recyclable at end of life*
- *Excellent chemical resistance*
- *Easily cleaned and disinfected*
- *Completely leak proof*
- *Electrical insulating properties*
- *Good sound insulation*
