

HPM KIT

> The high pressure pump sucks up the water and the foam concentrate. The calibration allows you to adjust the concentration according to the foam concentrate used. When the nozzle is closed, the premix returns to the recycling tank (pump inlet), not to the water tank.

Installation on Urban vehicles, Forestal vehicles and Vehicle first intervention

ADVANTAGES :

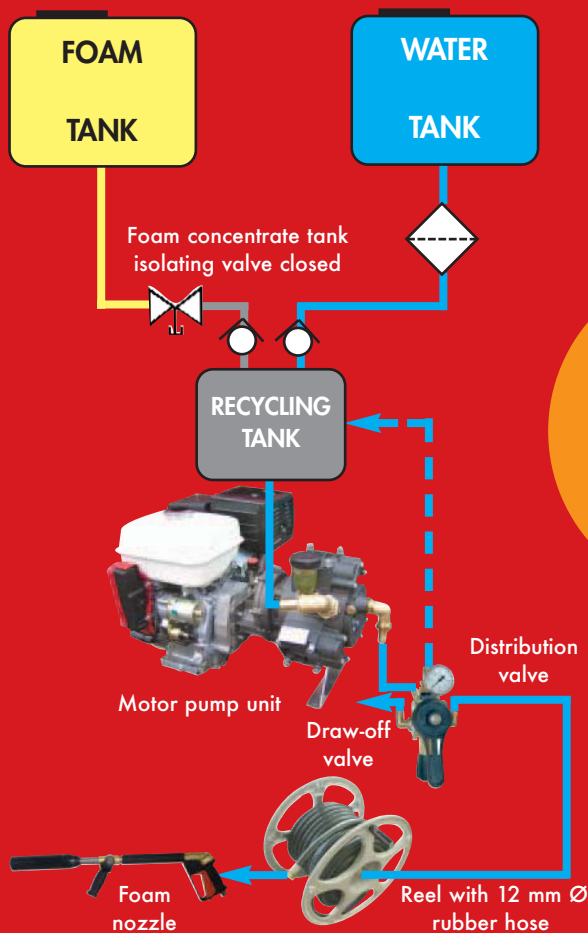

- > Water economy (quantity 3 times less)
- > Easy and cheaper
- > This system can be used on different vehicles (skid)

PUMP HIGH PRESSURE :

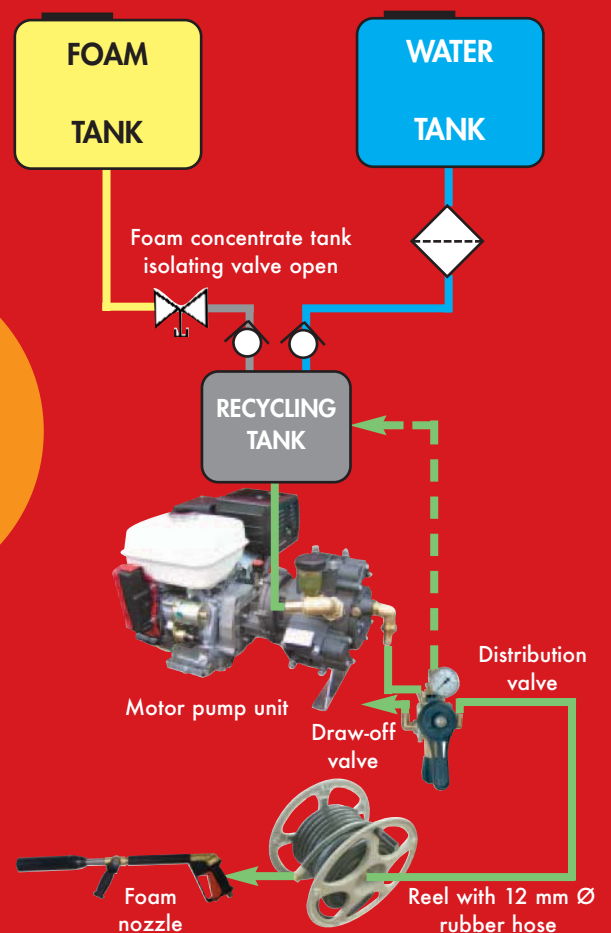

- > Pressure : 20 to 50 bar
- > Flow : 50 to 100 l/mn

Operation

With water

With premixture

Circuit legend:

- Water
- Foam
- Premix
- - - Empty circuit

Composition of HPM Kit

Foam nozzle

Recycling tank

Additive tank
30 or 60 liters
